DigitalStakeout Nexus

Investigative Intelligence and Knowledge Graph Platform

Nexus turns Scout events, leads and documents into an entity resolved knowledge graph your team keeps building. ChatGraph™, the AI graph builder in Nexus, researches each subject your team points it at. It keeps established facts apart from claims and puts a source on every link.

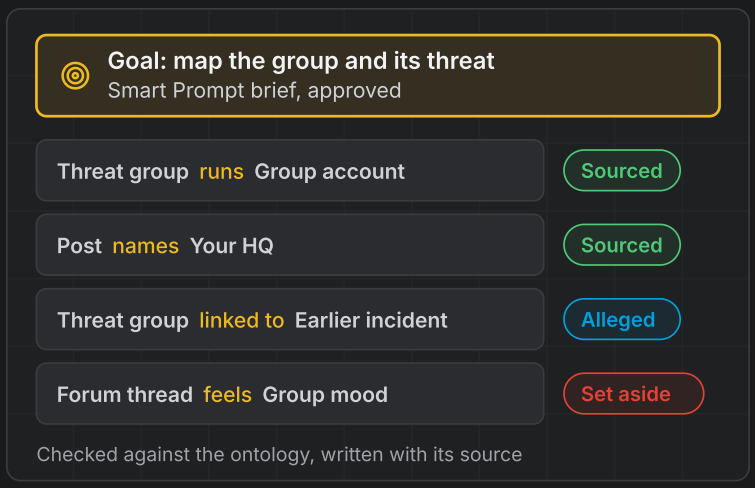

Every link in a Nexus case carries one status, set from the wording of its evidence.

Established
A source states it directly.

Alleged
A claim or hedged wording, kept with its speaker.

Not Established
No source supports it yet. It becomes an open gap.

Denied
A source contradicts it.

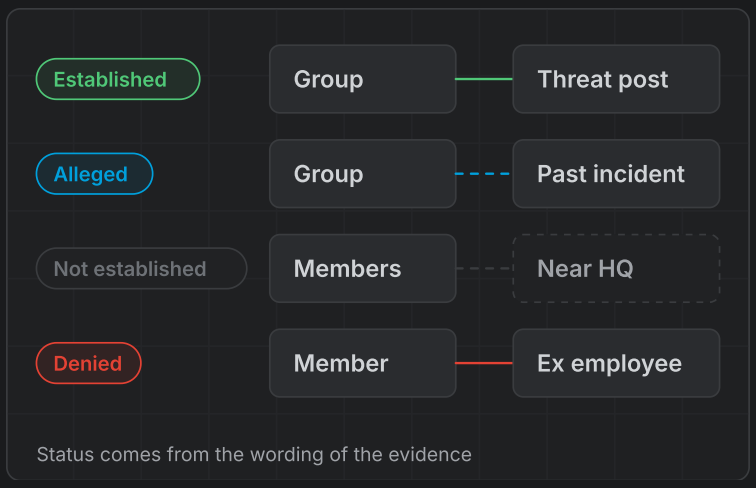

Map Who and What Is Involved With ChatGraph

- State the goal. Smart Prompt turns it into a research brief you approve first.
- Each research turn writes entities and links into the case, with its sources.
- A rules engine checks every type and link against the Nexus ontology.
- Ask Case Chat beside the graph for links with quotes and open gaps.

Keep What Is Established Apart From Claims

- Mark every link from the wording of its evidence. Hedged wording stays alleged.
- Record what others say about someone as their claim, with the speaker.
- Keep an account, email or domain as one node however it is written.
- Turn every open gap into the next line of research in one click.

Start the Case From Its Operational Focus

Advance Identification
Principals, travel, events and third parties, before risk is exploited.

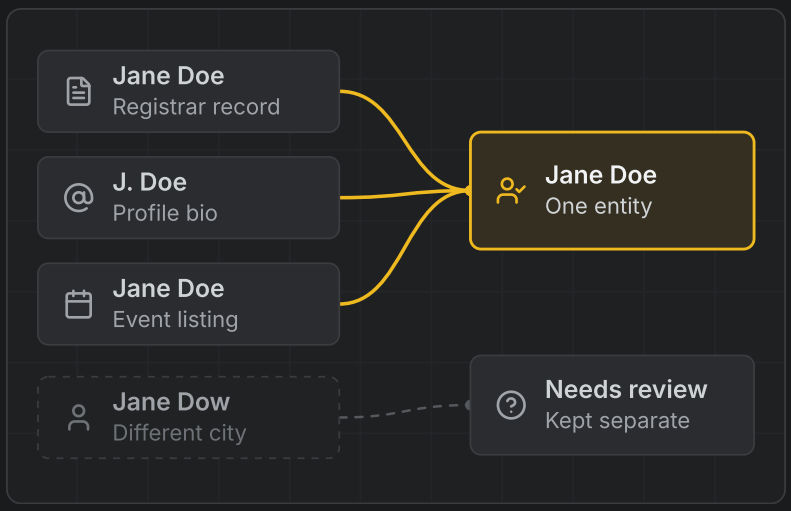

Active Incident Response
Stalking, harassment, hostile groups and crises as they happen.

Continuous Exposure
Impersonation, threat actors and insider risk over time.

Claims and Narratives
What is accurate, misleading or false in what is circulating.

Structured Casework
Asset tracing, litigation support and network analysis.

Subject and Network Mapping
An organization, a market or a person, mapped to the links you choose.

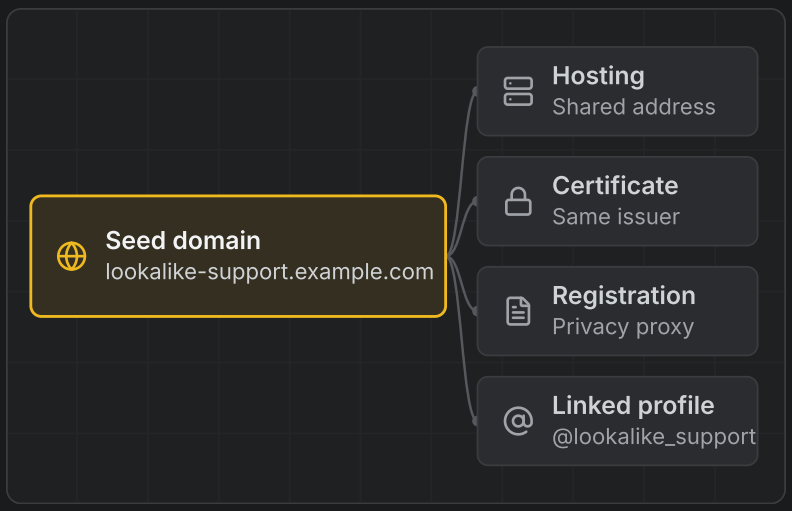

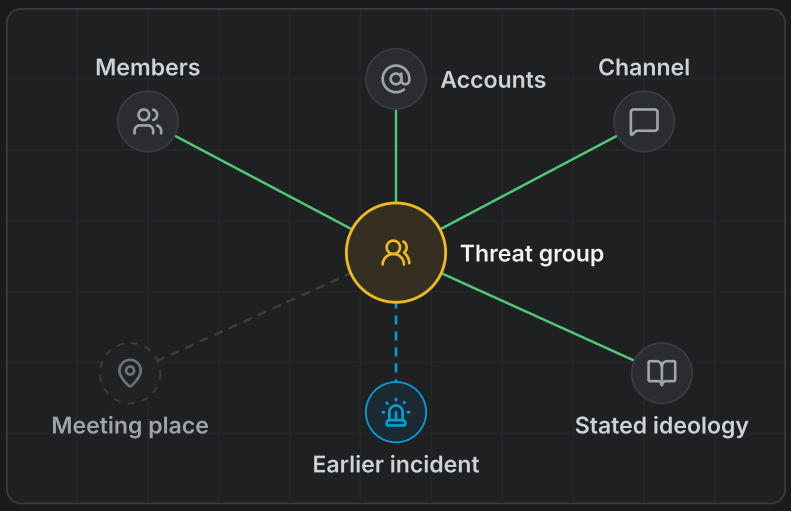

Resolve Identities and Extract Entities

- Merge clear matches as records arrive. Uncertain matches wait for an analyst.
- Keep a decision log of who made each merge or rejection, and why.
- Extract the people and companies named in filings, with the source passage.

Enrich Any Lead From the Sources Your Case Needs

- Run a transform on a person, company or domain and get sourced links back.
- Look up breach exposure, social profiles and corporate registries in one menu.
- Expand a node several hops out under the depth and spend limits you set.

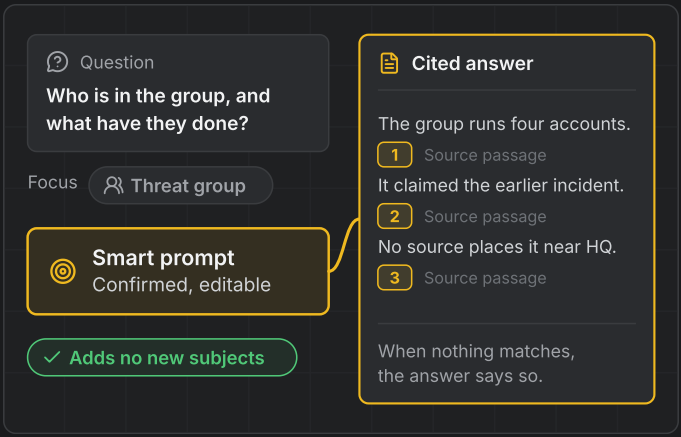

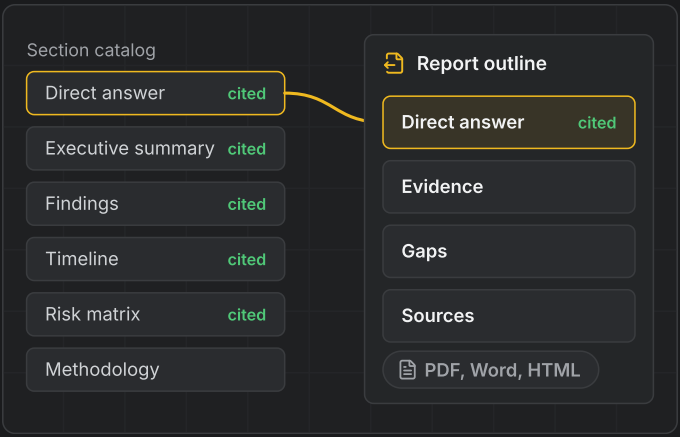

Investigate the Group Behind a Threat

- Map the members, accounts and channels of a group that threatens you.
- Record its stated ideology and meeting places as claims, with their sources.
- Mark a possible link to an earlier incident as alleged until a source establishes it.

Ask a Question and Get a Cited Report

Every claim is checked against its cited source before the report ships.

Ask a Question of the Case

- Get an answer built only from the case evidence, with a citation on every claim.
- Set the focus from your wording, or push it in from entities or the graph.
- The smart prompt is yours to edit, and it never adds a subject you did not name.

Build the Report From a Section Catalog

- Choose sections such as findings, a timeline and a risk matrix.
- Add gaps or AI drafted hypotheses only when you choose.
- Export to PDF, Word or HTML, and put an entity on a Scout monitor.

Report Types for Each Audience

Executive Summary
One or two pages for stakeholders.

Detailed Investigation
Full methodology, evidence and analysis.

Narrative Report
The case told as one story.

Timeline Report
Events in the order they happened.

Entity Profile
A deep dive on a single subject.

Corporate Due Diligence
For a merger, acquisition or investment.

Network Analysis
Relationships and connections.

Quick Summary
The key facts on one page.

Influence Landscape
Who matters most, and why.

Community Structure
Clusters and factions in the network.

Structural Patterns
Cycles, convergence and brokers.

Entity Deep Dive
A complete analysis of one entity.

Relationship Analysis
Edge types and reciprocal links.

Comparative Snapshot
How the network changed over time.
