

Protect Your Brand, Employees, and Customers with the Most Complete Online Threat Monitoring Tool in the Industry

As organizations leverage new technology and digital platforms to improve business processes, they also increase organizational risk. High-performance companies recognize the need to manage this risk with sophisticated and effective risk management solutions. Our cloud-based external threat monitoring solution enables security and risk professionals to use data from the web to protect your online brand, employees, and business reputation.

The Complexity and Volume of Digital Data

Known and unknown threats pose serious risks to employees, stakeholders, and corporate reputation, the primary factors driving every organization's success. We live in a world that is going through constant digital transformation. Information and news circulate on a 24-hour basis. Organizations cannot rely on manual processes and analysis to identify and manage external risks effectively. The data is too vast, the threats are dynamic, and the task is too complex.

Protect Customer Experience and Corporate Reputation

We deliver risk-oriented visibility by analyzing your criteria on the surface web, social media, and the dark web. Not only do we discover operational issues, but we also find out early warning signs of emerging threats to your brand, employees, and customers. When we find out anything matching your risk criteria, you'll be the first to know. While you're protecting what that matters the most, you will be defending the bottom line. Our customers spend 80% less time finding actionable information with DigitalStakeout compared to any other solution.

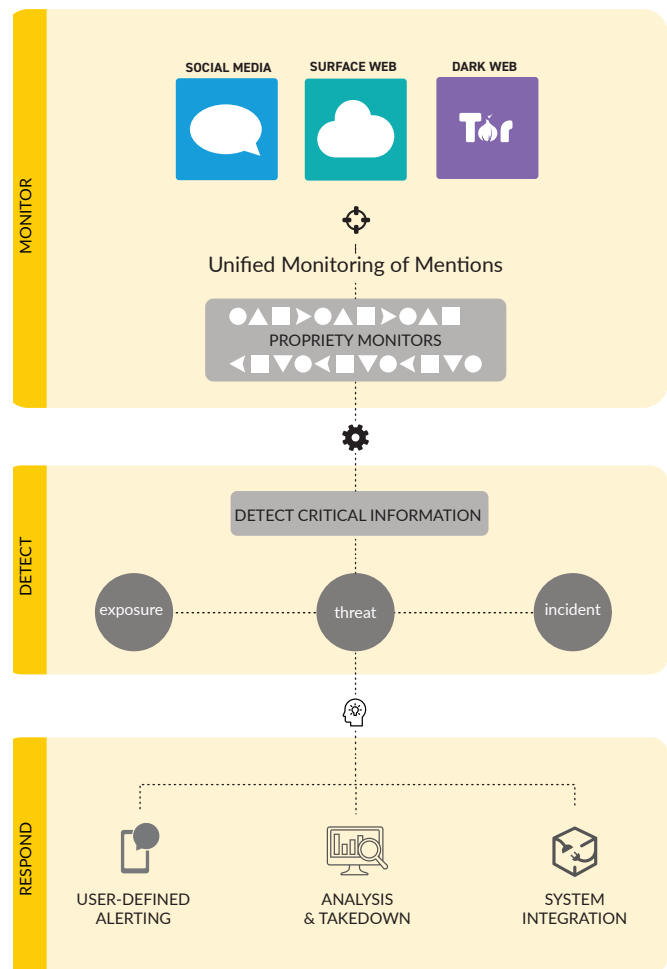

Industry Leading Online Threat Detection Monitors

DigitalStakeout offers a revolutionary on-demand online threat detection solution for risk managers and security professionals who want to use data from online sites, social media, and the dark web to protect the brand, employees, and the business reputation. Our proprietary cloud-based solution offers 24 x 7 coverage, user-defined alerts, and a simple web-based portal to review and investigate mentions, warnings, and incidents.

Stay Ahead of Known and Unknown Risks

We make it possible to identify abnormal items within the noise and detect early indicators of exposures, incidents, and emerging threats. DigitalStakeout external threat detection creates an opportunity for security and risk professionals to protect digital and physical assets. Automated monitoring for reputation, physical, operational, and cyber risk in the digital world expands visibility. It radically improves access to actionable information before events occur or create additional damage in the real world.

How to Manage & Mitigate Online Threats with DigitalStakeout

digitalstakeout.com • [800-840-6435](tel:800-840-6435) • info@digitalstakeout.com

Founded in 2010, DigitalStakeout offers a revolutionary online threat detection platform for risk managers and security professionals who want to use data from the web to protect brands, employees, and customers. Our solution generates actionable intelligence by aggregating and classifying public mentions sourced the surface web, social media, and dark web. Analytics and investigative tools illuminate risk, uncover threats, and warn of vulnerabilities.
